## How To Read a Film: multimedia edition

by James Monaco

Imagine!

An entire film course — the history of film, the origins of film technology, discussion of films, filmmakers, traditions and genres — available all on one DVD-ROM. That's what you get with the multimedia edition of *How To Read a Film*.

James Monaco's book has been a favorite since 1977—a standard introduction to film for a generation of readers, viewers, filmmakers, and filmgoers. The DVD-ROM brings the book to life: you can read it, but it also talks to you, plays movie clips, shows you pictures and slide shows, guides you to other references, and lets you play filmmaker by making your own movie.

The disc is fully loaded with:

- Four complete books: the completely revised third edition of *How To Read a Film*, *The Dictionary of New Media*, *Reading about Film*, and *Reading about New Media*

- More than 130 film clips — Hollywood classics, cult landmarks, rare finds, famous sequences — over four hours of film!

- Audio author's notes to give a new dimension to the text

- Audio interviews with Hollywood movers and shakers
- Animated interactive diagrams to make the technology understandable
- Film labs with a short movie shot especially for the disc — and users can edit the movie
- Virtual Reality tours of Hollywood studios, to take you where the action is
- A library of more than 140 reference texts, diagrams, charts, and databases
- Completely indexed — find references to any subject, person, theme, or film instantly
- Linked to the **ReadFilm.com** website — a forum for discussion, help, and updates
- Guided tours and multiple linking — easy for beginners, challenging for advanced users
- And much, much more!

See for yourself. Visit our website at [www.ReadFilm.com](http://www.ReadFilm.com) and catch *How To Read a Film* in previews! There's a tour of the disc playing online now.
